# Writing in Math Courses

Benjamin Gaines Assistant Professor of Mathematics Iona College

- In all of my core level math courses (Calculus I and II, Mathematical Thinking, Brief Calculus), I include weekly writing assignments.
- These are in addition to more standard problem set assignments, and ask students to use the ideas of the week in a real-world (typically less math-centric) context.

• For many students, the primary learning objective for a math class is not the specific mathematical content, but the problem solving and critical thinking skills.

**Benjamin Gaines** 

- For many students, the primary learning objective for a math class is not the specific mathematical content, but the problem solving and critical thinking skills.
- Writing assignments allow students to focus on concepts, and make connections between material they are learning and real world situations where they actually apply.

- For many students, the primary learning objective for a math class is not the specific mathematical content, but the problem solving and critical thinking skills.
- Writing assignments allow students to focus on concepts, and make connections between material they are learning and real world situations where they actually apply.
- These do not require computation; instead they require thought about how the topics of the class relate to the question being posed.

- For many students, the primary learning objective for a math class is not the specific mathematical content, but the problem solving and critical thinking skills.
- Writing assignments allow students to focus on concepts, and make connections between material they are learning and real world situations where they actually apply.
- These do not require computation; instead they require thought about how the topics of the class relate to the question being posed.
  - This is especially important because it demonstrates whether the issues students are having are primarily algebra-based, or if they are more conceptual.

イロト イ理ト イヨト イヨト

- For many students, the primary learning objective for a math class is not the specific mathematical content, but the problem solving and critical thinking skills.
- Writing assignments allow students to focus on concepts, and make connections between material they are learning and real world situations where they actually apply.
- These do not require computation; instead they require thought about how the topics of the class relate to the question being posed.
  - This is especially important because it demonstrates whether the issues students are having are primarily algebra-based, or if they are more conceptual.
- For students not as interested in mathematics, it connects it to another area that might be more engaging for them, and thereby make them more invested in the class.
